The **Art Seat** is made from a fire resistant grade of fibreglass.

The **Art Seat** is very flexible in how it can be used; it has a contemporary feel, but when produced in earth colours, blends well with more traditional settings too. The seat needs no fixings, due to the weight of the fill, but can be if needed for added security using our brackets: Simply unload and place in the desired location, fill 75% full with dry aggregates or sand, re-seal, flip over insitu and there it stays. It cannot be rolled, once filled, due to the re-settling of the dry material inside. For internal foyers and office entrance halls, no fill is required so that you can move the seats around easily to suit your needs.

The **Art Seat** can be customised. It can sport indelible vinyl graphics, to any design you like; poetry prose, photos, equations, formulae, or musical scores – displays on its sides. This could include the logo of a sponsor company, so the seats could be free of charge.

The **Art Seat** can be aligned in rows or curving lines, or in fact, in any arrangement that you like. It can be placed on either hard or soft surfaces so could save money on providing the hard standing you might otherwise use under benches, and add vital colour or art into the landscape.

Specify the **Art Seat** today - and save money (at just 50% of the cost of supplying and fixing normal park benches). It's the Smart choice for public realm seating, school grounds, play grounds, roof gardens, leisure areas, pool sides, entrance lobbies, parks and open spaces.
